\* - (AU 500.07) The auditor should consider the relevance and reliability of the information to be used as audit evidence. When audit evidence is obtained from independent sources or through the auditor's direct personal knowledge, it provides greater assurance of reliability. Identify any systems that initiate, authorize, record, process or report financial data in only electronic form. When evidence of any entity's initiation, authorization, recording, processing or reporting of financial data exists only in electronic form, the auditor may determine it is not possible to design effective substantive procedures which, by themselves, provide sufficient appropriate audit evidence the relevant classes of transactions or account balances are not materially misstated. In such cases, audit evidence may be available only in electronic form, and its appropriateness and sufficiency usually depend on the effectiveness of controls over its accuracy and completeness. (AU 315.31)

System	Account Balance/ Class of Transactions	Only Electronic Evidence Exists			Test of Controls Yes/No
		Initiation	Processing	Recording/ Reporting	

If yes, identify the general and application controls to be tested and develop an ICQ which addresses these areas. Note: Only test those general/application controls which pertain to the financial statement assertions affected by the above.

If no, document the audit evidence/procedures that will be performed to obtain an acceptable level of detection risk. Any procedure identified should be included under the approach to substantive tests for the applicable transaction classes.
